ISSUE 1, DATED 8.1.59

AMENDMENT No. 1.

Page 2, Group A

Add a new test as follows:-

Test	Test Conditions	AQL	Insp. Level	Symbol	Limits		Units
					max.	min.	
Contact Potential	Vf = 1.25 V Va = Vg2 = 0 Vg1 = 1.8 V through 200 k		100%	+ Ig1		0.25	uA

Page 4, Group F, Life Test End Point 1,000 hours.

Add a new test as follows:-

Contact Potential	As in Group A			+ Ig1	To be recorded	uA

VALVE ELECTRONIC **CV4093**

Specification MOS/CV4093
Issue 1, Dated 8.1.59
To be read in conjunction with K.1001, BS448 and BS1409

SECURITY	
Specification Unclassified	Valve Unclassified

→ Indicates a change

Type of Valve - Reliable H.F. Beam Tetrode Sharp Cut Off
Cathode - Directly Heated
Envelope - Glass Metallised
Prototype - VX9185

MARKING

See K.1001/4, except that the valve shall only be marked with the CV Number Factory and Date Code.

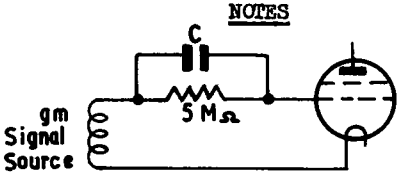
NOTES

1. Test in circuit



Bypass capacity C shall have a resistance of less than 20,000 ohms at the test frequency.

2. Raise V_f until filament opens. Test for filament to anode short only. After performance of the filament burn out test, if the short circuit shall pass in excess of five times the rated filament current without burning out the short circuit, the valve shall be deemed a failure. This test shall be performed by a Service Laboratory on three valves which shall be in addition to the required number for Type Approval samples. Manufacturer's data are not required for this test.

3. Filament voltage and H.T. voltage are switched simultaneously 1 min. on 3 min. off throughout the duration of the test. Frequency = 170 cps. The valves to be vibrated in each of three mutually perpendicular planes in turn for periods of 30, 30 and 39 hours. One plane to include the longitudinal axis of the valve.
