## Typical Operation

### As Plate-Pulsed Oscillator with Rectangular Shape at 3300 Mc/s

With duty factor<sup>f</sup> of 0.001 and pulse duration<sup>e</sup> of 1 microsecond at a pulse repetition rate of 1000 pps

Peak Positive-Pulse Plate-Supply Voltage . . . . .	1750	V
DC Plate Current . . . . .	3	mA
DC Grid Current. . . . .	1.4	mA
Grid Resistor. . . . .	2000	$\Omega$
Useful Power Output at Peak of Pulse . . . . .	1300	W

### GRID-PULSED OR CATHODE-PULSED SERVICE - Class C

#### Maximum Ratings, Absolute-Maximum Values

With duty factor of 0.01 and pulse width of 5 microseconds

Plate Supply Voltage . . . . .	2000	V
Peak Plate Current . . . . .	3	A
DC Grid Bias Voltage . . . . .	-100 min	V
Peak Grid Current. . . . .	1.5	A
Plate Dissipation. . . . .	10	W

## Typical Operation

### As Grid-Pulsed Amplifier with Rectangular Shape at 1090 Mc/s

With pulse duration of 0.5 microsecond at a pulse repetition rate of 2000 pps

Plate Supply Voltage . . . . .	1000	V
Peak Plate Current . . . . .	1.5	A
DC Grid Bias Voltage . . . . .	-30	V
Peak Driver Power. . . . .	50	W
Peak Power Output. . . . .	600	W

a With external shield.

b Grayhill, Inc., 561 Hillgrove Ave., LaGrange, Ill.

c Cinch Mfg. Co., 1026 South Homan Ave., Chicago, Ill.

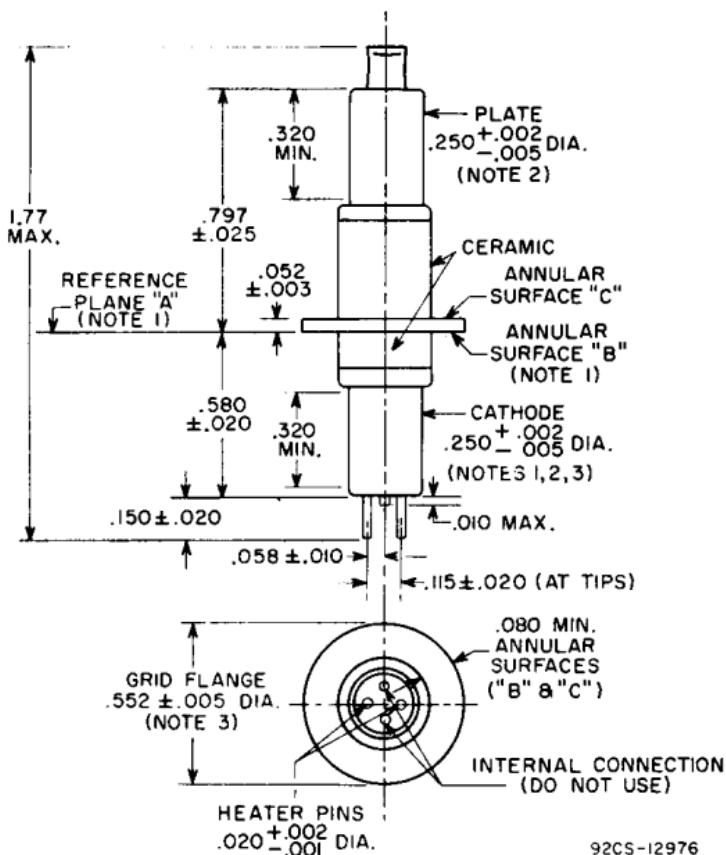

d "ON" time is defined as the sum of the duration of all individual pulses occurring during the indicated interval.

e Pulse Duration is defined as the time interval between the 2 points on the pulse at which the instantaneous value is 70% of the peak power value.

f Duty Factor is the product of pulse duration and repetition rate. For variable pulse durations and pulse repetition rates (pps), the duty factor is defined as the ratio of time "ON" to total elapsed time in any 5000-microsecond interval.

## DIMENSIONAL OUTLINE

## DIMENSIONS IN INCHES

Reference Plane "A" is defined as that plane against which annular surface "B" of the grid flange abuts.

Annular Surface "B" is on the side of the grid flange toward the cathode cylinder.

Annular Surface "C" is on the side of the grid flange toward the plate cylinder.

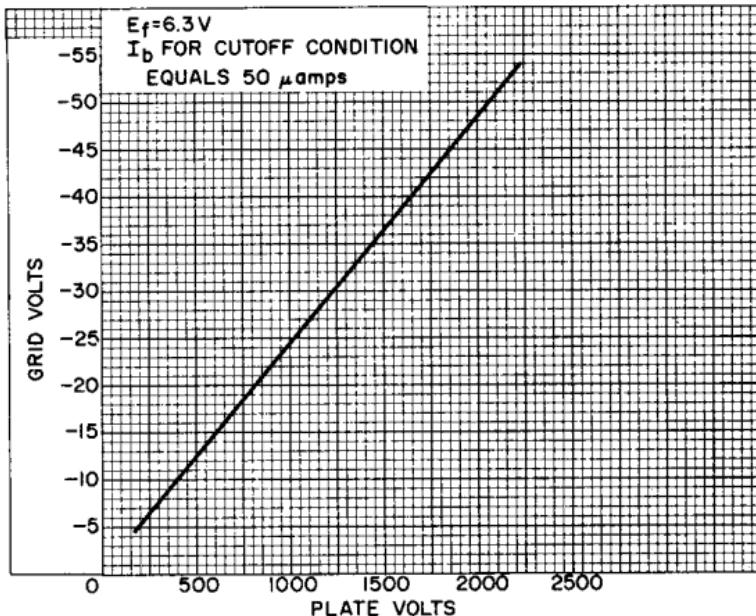

Note 1: With annular surface "B" resting on reference plane "A", the axis of the cathode cylinder will be within  $2^\circ$  of a line perpendicular to reference plane "A".

Note 2: The axes of the plate cylinder and cathode cylinder will coincide within 0.010 inch.

Note 3: The axes of the cathode cylinder and grid flange will coincide within 0.010 inch.
