TRAVELING WAVE TUBE

DESCRIPTION

The tube type 2131 is a miniature, lightweight, 25 watt CW traveling wave tube amplifier covering the frequency range of 7.0 to 17 GHz with 50 dB small signal gain. The tube uses a helix type slow wave structure and is PPM focused with samarium cobalt magnets. It is of metal-ceramic construction for rugged environmental applications. The tube is conduction cooled and may be mounted in any position. The collector is isolated and may be depressed up to 50% of the cathode voltage. Type SMA coaxial fittings are provided for RF input and output. An anode electrode is provided that may be used for gain, current control and ion trapping.
