

# TYPE 6K6GT

## HYTRON BANTAM

### GENERAL DESCRIPTION

Application: The Hytron 6K6GT is a cathode type power amplifier pentode which may be employed either singly or in push-pull arrangements. The 6K6GT is a glass tube equipped with a small octal base and has ratings and characteristics identical to those of the type 41.

Physical Characteristics: Bulb T-9D

Bottom View

### RATING AND CHARACTERISTICS

Heater:

Voltage	6.3	Volts
Current	0.4	Ampere

Note: Voltage between heater and cathode should be kept at a minimum if direct connection is not possible.

### OPERATING CONDITIONS AND CHARACTERISTICS

Plate Voltage	125	167.5	180	250 <sup>oo</sup>	Volts
** Grid Voltage	-10	-12.5	-13.5	-18.0*	Volts
Screen Voltage	125	167.5	180	250 <sup>oo</sup>	Volts
Plate Current	11	17	18.5	32	Milliamperes
Screen Current	2	3	3	5.5	Milliamperes
Plate Resistance (Approx.)	100,000	85,000	81,000	68,000	Ohms
Mutual Conductance	1525	1800	1850	2200	Micromhos
Amplification Factor (Approx.)	150	150	150	150	
Load Resistance	11,000	9,500	9,000	7,600	Ohms
Power Output <sup>o</sup>	0.65	1.25	1.5	3.4	Watts

\*Total harmonic distortion of 10%.

<sup>oo</sup> Maximum

\* A bias of -16.5 volts and a load of 7000 ohms will give a power output of 3.2 watts with a 7% total harmonic distortion.

\*\* Transformer or impedance-coupled input systems are recommended. If resistance coupling is used the D.C. resistance in the grid return must be limited to 1 megohm for self-biased conditions and .1 megohm for fixed-bias conditions provided that the heater voltage does not exceed rated value by more than 10% under all operating conditions.

from RMA release #134, April 11, 1938

Note: For characteristic curves refer to the type 41.

§All values are evaluated on design center system except where absolute maximum is stated.

§§For operation in a 525 line, 30-frame system as described in "Standards of Good Engineering Practice for Television Broadcasting Stations; Federal Communications Commission". The duty cycle of the voltage pulse not to exceed 15% of a scanning cycle.

#In stages operating with grid-leak bias, an adequate cathode bias resistor or other suitable means is required to protect the tube in the absence of excitation.

Refer to "Interpretation of Receiving Tube Ratings"
