

TOP.1203

TRAVELING WAVE TUBE

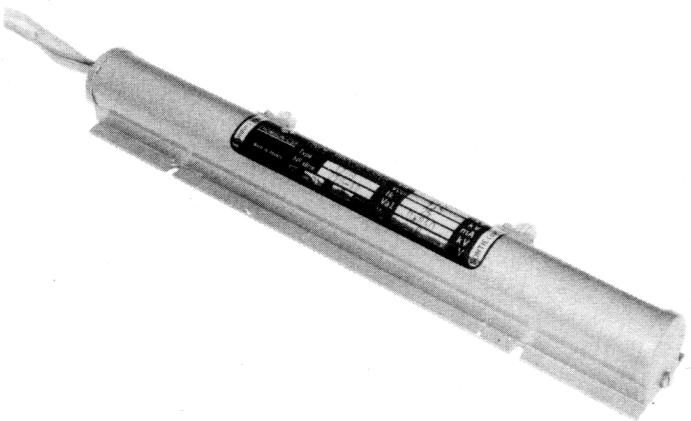

The TOP1203 traveling wave tube is a broadband amplifier capable of providing a minimum saturated output power of 7 W from 4.0 to 8.0 GHz. The gain for an output power of 7 W is more than 35 dB. Integral periodic permanent focusing reduces the stray magnetic field and saves weight.

The TOP1203 is cooled by natural convection and conduction. Because of its small size, light weight, and sturdy construction this tube is especially attractive for transportable and airborne equipments.

The AMP.2077A amplifier, fitted with the TOP1203 traveling wave tube is ideal for laboratory measurements, wideband amplification for radars and communications, antenna pattern measurements etc.. This amplifier incorporates a power supply, a TOP1203 traveling wave tube with its permanent magnet, a modulating circuit and security devices.

A TWTA is available including TOP1203 with its integral power supply :

The BFA.1208 is a small, light weight, compact, adjustment free microwave amplifier fitted with the TOP1203 intended for airborne and transportable equipments, radio links and space communications. (see Data Sheet TEH 4081).
